Geriatrics in 4D: Systems, Culture, Community, and Compassion

Caring for older adults goes beyond managing diagnoses. We navigate complexity with clarity, humility, and heart. GERIATRICS IN 4D is an immersive, hands-on workshop designed to transform how we practice, teach, and design care for ageing populations.

✦ Workshop Highlights

✈ Systems Thinking in Action

Learn to manage multimorbidity, polypharmacy, and care transitions by seeing the whole system, not just the patient in front of you.

🤝 Social Prescribing & Community Care

Explore practical ways to address social isolation, caregiver burden, and non-medical drivers of health through community-centered solutions.

🌍 Culturally Responsive Geriatric Care

Build skills for family-centered decision-making, culturally sensitive conversations, and ethical care across diverse settings.

🗣 Communication that Matters

Practice high-stakes geriatric conversations with confidence through immersive, OSCE-inspired (IMMERSE-Geri™) simulations that reflect real-world complexity.

This is an immersive learning experience for better geriatric care and education.

The future of healthcare is ageing—and it deserves better systems, better conversations, and better care. ❤️

Time: March 24, 2026
from 1:00 PM - 5:00 PM

Registration Fee: 50 USD
